GENTLE GIANT

KAREN MITCHELL/MINNEDOSA TRIBUNE

Rick Kachur of Langenburg, SK, was among the Clydesdale horse owners to show at the Minnedosa Fair and Exhibition over the dates of July 16 and 17. Braiding a horse's mane and tail is all part of showing and dates back centuries. Compared to ponies or light horses, a sturdy stool is often required to braid this type of draft horse due to their height, as after-all, they are known as gentle giants.

Chronic Wasting Disease being monitored in area

RACHEAL FLINTOFT

Minnedosa Tribune

Updated actions by the province have been executed in response to the probable spread and future prevention of Chronic Wasting Disease (CWD) across Manitoba.

These additional actions include the expansion of the mandatory sample submission zone for harvested cervids (deer), as well as a newly established mule deer hunting season in defined areas along

the western and southern borders of Manitoba.

"Manitoba has instituted a mule deer season whereby licensed hunters can harvest up to three mule deer with a very reasonable fee of \$5 per tag, and with the purpose being able to significantly reduce the numbers of mule deer," explained Robert Sopuck, a wildlife specialist, and retired Member of Parliament (MP) for the constituency of Dauphin-Swan River-Neepawa. "Mule deer are especially suscepti-

ble to CWD and are fairly recent arrivals in Manitoba."

A cervid population program was put into place last fall, after CWD was first identified in Manitoba following the testing of a mule deer near Dropmore. After the initial findings, at the time there was a temporary hunting ban initiated in GHA 22 zone, as well as ongoing sample collections. Since, there has been four more mule deer test positive for CWD along the Manitoba-Saskatchewan border.

"I was very heartened to hear about the cooperation from the entire hunting community, including licensed and rights-based hunters," Sopuck said. "This is yet another example of hunters stepping up to the plate when it comes to conserving and protecting our precious wildlife resources."

The reduction in the population of all cervids – deer, elk, moose, and caribou – as well as the overall health of the cervid population, has been priority for Manitoba Natural

Resources and Northern Development (MNRND), who initiated the additional CWD measures.

Game hunting areas along the Saskatchewan border will require hunters to submit samples of all deer taken, including white tails, for testing, Sopuck said.

"This testing will determine whether the disease is spreading and the location of pockets of infection."
